

ResQ MICROCHIPPING YOUR PET IS THE BEST WAY TO ALWAYS FIND IT!

(Contents of a microchip package shown above)

There is **no charge** for PetLink™ pet registration or registration updates with **resQ**.

ResQ™ is the first ISO-compliant microchip system for companion animals available at animal shelters and veterinarians' offices in the United States.

Each **resQ** microchip contains an individual, pre-programmed code that is permanent, unique worldwide, and cannot be altered.

ResQ microchips are unbreakable, do not require a battery, and are designed to last the pet's lifetime.

How It Works

ResQ™ features a microchip that is approximately the size of a grain of rice and is implanted into a pet using a single-use syringe. The microchip contains a unique serial number that can be read using a radio frequency scanner. Once the serial number has been detected and read by the scanner, the pet can be traced to its owner and reunited.
